

Aptitude Questions

Question 1

Company: Tata Consultancy Services (TCS)

Round: Aptitude Test

Year: 2026

Difficulty: Medium

Topic: Time, Speed and Distance

Question:

A train travels at a speed of 60 km/h and takes 30 seconds to cross a pole. What is the length of the train?

Options:

- A. 400 m
 - B. 500 m
 - C. 600 m
 - D. 700 m
- Answer:**

B. 500 m

Explanation:

First, convert 60 km/h into metres per second:

$$60 \times \frac{5}{18} = 16.67 \text{ m/s.}$$

$$\text{Distance travelled in 30 seconds} = 16.67 \times 30 = 500 \text{ m.}$$

Since the train is crossing a pole, the distance travelled is equal to the length of the train. Therefore, the length of the train is **500 metres**.

Question 2

Company: Cognizant

Round: Aptitude Test

Year: 2026

Difficulty: Hard **Topic:**

Percentage

Question:

The price of an article is increased by 20% and then decreased by 20%. What is the overall percentage change in the price?

Options:

- A. No change
 - B. 2% decrease
 - C. 4% decrease
 - D. 4% increase
- Answer:**

C. 4% decrease

Explanation:

Let the original price be ₹100.

After a 20% increase, the price becomes ₹120. A 20% decrease on ₹120 gives ₹96.

The price changes from ₹100 to ₹96, resulting in a **4% decrease**.

Therefore, the correct answer is **C. 4% decrease**.
