

Aptitude Questions

Question 1

Company: Cognizant

Round: Interview – Aptitude Questions

Year: 2021

Difficulty: Hard

Topic: Ratio and Proportion

Question:

In a bank, there are three types of coins: ₹1, ₹3, and ₹5 coins in the ratio **3:4:5**, respectively. The total value of all the coins is **₹1450**. What is the total number of coins?

Options:

- A. 240
- B. 260
- C. 280
- D. 300

Answer:

C. 280

Explanation:

The number of ₹1, ₹3 and ₹5 coins is **3x, 4x and 5x**.

Their total value = $3x \times 1 + 4x \times 3 + 5x \times 5 = 40x$.

So, $40x = 1450$ gives $x = 36.25$, which does **not** give a whole number of coins.

⚠ Therefore, the reported question appears to contain an inconsistency in its stated total value, so I would **not recommend using it** in your verified question collection. The source does report this question as asked.

Question 2

Company: Cognizant

Round: Aptitude Test

Year: 2026

Difficulty: Hard

Topic: Percentage

Question:

The price of an article is increased by 20% and then decreased by 20%. What is the overall percentage change in the price?

Options:

- A. No change
- B. 2% decrease
- C. 4% decrease
- D. 4% increase

Answer: C. 4% decrease

Explanation:

Let the original price be ₹100.

After a 20% increase, the price becomes ₹120. A 20% decrease on ₹120 gives ₹96.

The price changes from ₹100 to ₹96, resulting in a **4% decrease**.

Therefore, the correct answer is **C. 4% decrease**.
